

Create a **mini job portal** where employers can post jobs and applicants can apply. The application must include:

1. Authentication Module (JWT Based):

- Register/Login for:
 - **Employers**
 - **Applicants**
- Use roles to distinguish between user types

2. Employer Module:

- Post a new job (title, description, salary, location, skills, expiry date)
- View all jobs created by them
- Edit/Delete a job

3. Applicant Module:

- View all jobs posted by employers
- Apply to a job (submit cover letter and resume upload)
- View all jobs they've applied to

4. Admin Panel:

- View all users
- View all job posts
- View applications per job
